This glazed wall tile has a "transit wax" on the surface of the tile to protect the finish during shipment.

Procedure to remove the transit wax:

1. Soak a white nylon scrub pad in warm water and then lightly scrub the surface of the tile. Note, a razor scraper with a rigid plastic blade may also be used.
2. May require a diluted solution of water and a neutral pH formula cleaner (Diversey "Prominence" Heavy Duty Floor cleaner available from Holland Cleaning Solutions).
3. Apply the solution of cleaner and water onto the surface of tile, let sit for 5 minutes and then lightly scrub the surface of the tile with the white nylon scrub pad.
4. Rinse with water and a clean cloth.

CTDA COLOUR SHADE VARIATION GUIDE

The colour shade or shades of all tile varies some degree from piece to piece, from each production run to run. At least several pieces from the same production run should be reviewed whenever possible to determine acceptable colour shade variations. Any questions or concerns about your tile selection should be clarified prior to installation.

- V1 – Uniform Appearance: Differences among pieces from the same production run are minimal.
- V2- Slight Variation: Clearly distinguishable differences in texture and/or pattern within similar colours.
- V3- Moderate Variation: While the colours present on a single piece of tile will be indicative of the colours to be expected on the other tiles, the amount of colours on each piece may vary significantly. For example “that little bit of colour” on one piece of tile may be the primary colour on the next piece.
- V4- Random Variation: Random colour differences from tile to tile, so that one tile may have totally different colour from that on the other tiles. Thus, the final installation will be unique.

ADHESIVE QUICK CHECK CHART

Use of Adhesives and Remediation Membranes

American Biltrite's position regarding the use of adhesives and remediation membranes for its flooring products is fairly simple. In order to achieve the highest performance of our flooring products, extensive research was done on the performance of the products prior to making these available to the market.

We also ran extensive tests, including pilot floor testing, climate change exposition and heavy rolling load to ensure that we minimize any problematic situation that would result from our recommendations.

For these reasons, we will support our flooring products and the adhesives we have listed on our Quick Check Chart for the applications they are intended for.

You can also refer to our document titled "Remediation Systems for All American Biltrite Flooring Products" found on our website.

All other adhesives and remediation membranes are the responsibility of the Flooring contractor.

We will not recognize any claim attributed to an adhesive failure if our recommendations are not followed either for the type of adhesive or the intended application.

Please note that technical web site documents prevail.
