PORCELAIN &
CERAMIC

CLEANING CERAMIC & PORCELAIN TILE

1. Use a vacuum cleaner to remove excess dust.

2. Wet the surface with clean water so that the grout is covered and protected from the corrosive action of the detergent **(FILA DETERDEK).**

3. Dilute **FILA DETERDEK** detergent in water (1L of product: 5L of water). Spread the solution over a small area at a time, wait 2 to 3 minutes, then clean with a mop.

4. Use a nylon brush to remove excess grout and dirt from the surface.

5. Rinse the surface 2 to 3 times with clean hot water to neutralize the action of the detergent.

6. Use **FILA CLEANER** detergent, then rinse with warm water and wipe.

ROUTINE MAINTENANCE

1. Remove dirt with a brush, dry cloth or a vacuum cleaner.

2. To remove dirt from the surface, wipe with a damp cloth or remove stains with **FILA CLEANER.**

3. Rinse all surfaces with clean warm water.

FILA CLEANER
Cleans all types of floors and surfaces. Essential for washing natural stone floors after being laid, particularly those with a polished finish that are sensitive to strong detergents.

FILA DETERDEK
Removes post-application deposits and building-site dirt. Eliminates saline efflorescence from terracotta. Eliminates lime-scale from floors, showers and bathroom fittings. Cleans outdoor floors.

FILA PS/87
When diluted, cleans and removes grease from dirty floors on porcelain, ceramic, natural stone, terracotta and cement. Eliminates pre-treatment residue from polished porcelain tiles.

FUGANET
Thoroughly cleans grout in ceramic tile floors and walls. Suitable for single-fired and double-fired porcelain tiles. Unsuitable for porous surfaces treated with wax.

FUGAPROOF
Prevents stain absorption. Makes dirt removal easier. Ideal for mosaics. Keeps tile joints looking new for years.
