

MOLDING INSTALLATION GUIDE

General installation instructions for T-Molding, Reducer and Square Nose moldings

All Beaulieu Canada moldings described below come with a trim track for an easy and sturdy installation. Follow these simple steps to install your moldings:

1. Cut the molding and trim track to the required length.
2. Screw or glue the trim track to the subfloor.
3. Allow a ¼" expansion gap between the trim track and the flooring.
4. Press the molding into the trim track until it is firmly in place. A rubber mallet may be required to fully engage it into the trim track.

T-Molding	Reducer	Square Nose	Trim Track
			
Used in doorways and entryways or for transition between hard surface floor coverings of same levels.	Provides a smooth transition between hard surface floor coverings of different heights.	Used to finish the flooring edge of a landing or for sharper transition between hard surface floor coverings of different heights.	Holds the molding in place.
