

January 15, 2017

To our valued customers:

M-D PRO Vinyl Trims are manufactured using prime virgin PVC material. We recycle 100% of all scrap produced in house and some of this scrap re-enters the manufacturing process. The percentage of internally recycled material varies by product. This process may qualify for the Recycled Content LEED credit based on diversion of PVC from disposal.

The aluminum mouldings we manufacture are made from prime 6063 or 6463 billet sourced within 60 km of our plant in Mississauga. Aluminum is 100% recyclable and may qualify.

Our manufacturing plant is located in Mississauga, ON (L4W 2B1) so there is a possibility that you may qualify for the Local Regional Materials LEED credit depending on the location of the jobsite.

The products may also qualify for Low Emitting Materials contributing to a positive indoor air quality.

Please don't hesitate to contact us if you should require any further information. Our customer service team is available to assist you. You may also visit [www.mdpro.com](http://www.mdpro.com) for information about all our products.

Sincerely,

Joe L. Comitale  
President | M-D PRO
